L.F. Koziol

## **The Myth of Executive Functioning**

Missing Elements in Conceptualization, Evaluation, and Assessment

Series: The Vertically Organized Brain in Theory and Practice

- ▶ Builds on same author's just published Brief, *ADHD as a Model of Brain-Behavior Relationships*
- ▶ Generates a radical paradigm shift in contemporary neuropsychology
- ▶ The application of new test paradigms and tests is proposed
- ▶ A volume in *The Vertically Organized Brain in Theory and Practice* (a subseries of *Springer Briefs in Neuroscience*)
- ▶ Cognitive control as an evolutionary expansion of the fronto-striatal and cerebro-cerebellar vertebrate brain systems

Executive functioning: we measure it, assess it, document its development in youth, track its decline in age, and use it as a basis for diagnoses, treatment planning, and--of course--theories. Could it be possible that science has spent decades chasing a cognitive phantom?

Noting the lack of consensus concerning definition, component skills, and location within the brain, *The Myth of Executive Functioning* calls basic assumptions, prominent theories, commonly used test methods, and even the phrase *executivefunctioning* into question. The book's deceptively simple argument takes an evolutionary/neuroscience look at the cornerstones of cognitive organization, including memory, planning, decision-making, and adaptation to novel circumstances. From there, gaps are identified between systems of cognitive control and those behaviors that are evaluated in neuropsychological testing--gaps that contribute to the disconnect between how science views mind and body, brain and behavior. The author's problem-solving metaphor places new emphasis on stimulus processing and on the relationship between movement and thought as he offers thought-provoking perspectives on:

- The limits of neuropsychological constructs.
- The components of adaptive thinking.
- The automatic aspects of problem solving.
- The left-brain/right-brain dichotomy.
- Problems with the domain approach to cognition.
- New paradigms for testing cognitive functioning.
